SUMMARY

A Software Engineer with 4.5 years of experience building large-scale backend systems. Specialized in high-concurrency, low-latency, cloud-native infrastructure and performance optimization. Delivered products that serve millions of users.

TECHNICAL SKILLS

Languages: Java, Python, Go, C

Backend: Spring Framework, Spring Boot, Microservices, Camunda, REST, gRPC, JUnit, Mockito, Testcontainers

Infra & Data: Apache Kafka, Redis, MySQL, MongoDB, Elasticsearch, MinIO, ClickHouse

Platform & Ops: Kubernetes, Docker, Jenkins, Grafana, ELK, K6, Linux, Bash, Git

AI Toolings: Claude, OpenAI Codex, Agentic Workflows, Prompt Engineering

EXPERIENCE

Viettel Digital

May 2021 – Jun 2025

Backend Software Engineer

Hanoi, Vietnam

Customer Engagement Platform

2023 – 2025

- Designed and implemented an **in-house marketing platform** supporting personalized campaigns through push notifications, in-app messaging, and rewards distribution, processing **100M+ events** daily.
- Increased user segmentation creation throughput from **500 to 35,000 QPS** while **reducing p95 latency by 80%** by introducing **Roaring Bitmap-based solution** and multi-layer caching.
- Engineered a Camunda-based workflow orchestration module, enabling operations teams to independently configure and manage 200+ single- and multi-step marketing workflows per month.
- Led 4 backend engineers** through sprint planning, system design, and peer code reviews, supporting agile delivery of features for evolving product requirements.
- Owned end-to-end system observability using **Grafana**, identifying performance bottlenecks and improving reliability through configuration tuning, caching strategies, and microservices refactoring.

Data Tracking System

2022 – 2023

- Designed and delivered a high-throughput **in-house event tracking system** for mobile and web platforms, processing **150M+ events daily** and replacing a third-party tracking provider to **reduce licensing costs**.
- Implemented an online tracking rule configuration module supporting 3,000+ dynamic rules, **reducing event validation latency by 30%** by replacing linear rule processing with a decision tree-based validation engine.
- Built non-blocking ingestion APIs using **Spring WebFlux**, supporting **1700+ RPS** on average for high-volume event ingestion while reducing request-per-thread overhead.

Smart Authentication System

2021 – 2022

- Collaborated on the research and delivery of **Smart OTP** solution supporting **20M+ end users**, eliminating reliance on SMS OTPs, **saving over \$200K annually** and enhancing authentication reliability.
- Implemented secure key exchange, OTP generation, and digital signature mechanisms across critical APIs, meeting internal cryptographic and security-review requirements.
- Hardened Android application security using native **C/JNI**, applying obfuscation and root/jailbreak/tamper detection, successfully passing enterprise-level security audits.

EDUCATION

George Mason University

Aug 2025 – Dec 2026 (Expected)

M.S. in Computer Science | GPA: 3.86

Fairfax, VA, USA

Hanoi University of Science and Technology

Aug 2017 – May 2021

B.S. in Information Technology | GPA: 3.62 (top 5% of cohort)

Hanoi, Vietnam

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

Sep 2023

Oracle Certified Java SE Programmer

Apr 2023
